

Electronic Article Surveillance

EAS-RF anti-theft solutions for Retail

Electronic Article Surveillance (EAS) system is an anti-theft technology that is proven to protect merchandise against shoplifters. Small security tags, applied to high-value merchandise, alert retailers when shoplifters try to take items through electronic gate sensors at exit doors. EAS systems provide a good deterrent against casual theft. The occasional shoplifter, not being familiar with these systems and their mode of operation, will either get caught by them or will refrain from stealing.

CA-24 Premium gate antenna

Features:

- EAS-RF (Digital) Antennas
- 8.2 MHz frequency band
- Digital signal processing
- Wide distance (1.6 ~1.8m)

Electronic Article Surveillance EAS-RF anti-theft solutions for Retail

Low cost, durable EAS-RF (8.2 MHz) systems & supplies...

Hard tags

Variety of hard, plastic tags (re-usable) are available suitable for your merchandise. These tags (commonly attached to most apparel) are armed with an almost impossible to defeat locking mechanism. Choose from a variety of hard tags suitable for apparel, bags, shoes, cosmetics etc.

RF labels

RF paper tags & labels with optimized circuit design are available in variable types & sizes that can be printed with price, inventory, and promotional data with barcode label printers, and securely applied on pre-packed products.

Deactivators

Portable, pad type deactivator unit allows for extremely fast & easy deactivation of RF labels & tags at point of sale. Barcode scanners (with EAS functionality) are also available that can scan, read & de-activate labels.

Detachers

Durable, easy-to-use detachers are available to remove most hard tags. Detachers are hand-held or fixed - most are simple devices with no moving parts, which make them very durable. Lock for detacher unit is also available.
